

PRO600 ANTENNA SIRIUSXM RADIO

**PIXEL TECHNOLOGIES
EXCLUSIVE PRODUCT**

HIGH GAIN SIRIUSXM SATELLITE RADIO ANTENNA

The Best Multi-signal Satellite Radio Antenna on the Market

Get Sirius Radio or XM Radio satellite sign with this high gain amplified antenna

The PRO600 kit includes everything needed to install into a client location, just add your own RG-6 cable. Unlike other Satellite Radio antennas, the PRO600 filters out all potential signal interference such as WIFI, CB radios, or Cell Phones that cause you to receive a weak signal using a standard satellite radio antenna. The PRO600 can run up to 200 feet of RG-6 coaxial cable before needing additional amplification or power. In addition the PRO600 can receiver both Sirius and XM signals simultaneously.

PRO600 SPECIFICATIONS

Details	
Optimized	Multi-path rejection
High Gain	8.5i isotropic dB gain
Internal Amplifier	2 stage ultra-high low noise
Beam	+ - / 35 degrees
Cable	Works with RG-6 Coaxial
Pole Mount	2 inches in diameter
Antenna Cable Length	200 feet without amplifier or power
Wind/Weather Resistant	Wind up to 100mph
